Skills

- **Programming:** JavaScript, TypeScript, Python, Java, Go, SQL, Bash
 - **Frontend:** React, React Native, Expo, Angular, Next.js, Tailwind, WebSockets
 - **Backend:** Node.js, Express, FastAPI, GraphQL, Redis, Postgres, MongoDB, Prisma, Supabase, tRPC, Zod
 - **Infrastructure & DevOps:** AWS, Docker, Terraform, Kubernetes, GitHub Actions, Jenkins, Cloudflare, Consul, Edge Functions (Vercel, Cloudflare Workers)
 - **AI & Data:** Hugging Face (NSFW filtering, embeddings), OpenAI, Anthropic, LangChain, Vector DBs (Weaviate, Pinecone), Elasticsearch, FHIR
 - **Tooling:** Cursor (AI-driven coding), Warp (modern CLI), Notion (workflow automation), Obsidian (PKM), Bun (JS runtime)
-

Experience

Senior Software Engineer

Kyros (*April 2023 - October 2024*)

- Maintained and enhanced billing systems for peer services, supporting medical billing teams.
- Designed and implemented a monthly insurance verification tool, reducing manual checks.
- Expanded system capabilities to support new markets and billers, improving coverage rates.

Founding Engineer

Hyp (*December 2021 - March 2023*)

- Developed a real-time auction platform, implementing AWS-based backend infrastructure.
- Built automated testing and Stripe payment integration to ensure reliable transactions.
- Integrated Instagram APIs to enhance social engagement and drive traffic to the platform.

Platform Consultant / Full Stack Engineer

Propeller Health (*May 2017 - October 2021*)

- Led external system onboarding, streamlining integrations for major commercial partners.
- Supported digital therapeutics platform integrations with Walgreens, Express Scripts, and more.
- Managed technical relationships to ensure seamless data exchanges and interoperability.

Volunteer

Reboot Kamp, Amman, Jordan (*December 2016 - April 2017*)

- Mentored students through a 4-month JavaScript Immersive Program, focusing on pair programming.
 - Designed sprint-based learning modules to build both technical and soft skills.
-

Projects

Notion Workout Automation

[GitHub](#)

- Automates workout tracking in Notion by duplicating exercises from predefined templates.
- Uses Cloudflare Workers to process requests, log interactions, and prevent API rate limits.

Cover Letter AI

[GitHub](#)

- AI agent powered application aide that analyzes job descriptions and resumes.
 - Built with FastAPI, Supabase, OpenAI, and Anthropic, leveraging multiple AI agents for ATS optimization.
-

Education

University of Wisconsin Madison (2008 - 2012)

- Studied chemistry and biology, focusing on biophysics instrumentation research.
- Developed protein extinction coefficient testing methods before leaving academia.
